Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 81-111, drawn to an ablation device, classified in class 607, subclass 100.
- Claims 112-117, drawn to a surgical method, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group 1 and group 2 are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method requires the distal portion of the ablation device to be manipulated and conform the ablation surface to the tissue. The instrument of group 1 does not require the distal portion of the device to conform to the surface of the tissue.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Carothers on 5/9/02 to withdraw the outstanding restriction and apply the above restriction requirement. An election was not made at the time.
